QUICKSTART RULES

WELCOME TO JUDGE DREDD & THE WORLDS OF 2000 AD!

Judge Dredd & The Worlds of 2000 AD is the core rulebook for the whole line of worlds and settings from the iconic comic, *2000 AD*. The core rulebook focuses on adventures in Mega-City One, but future setting books will detail other stories from the pages of *2000 AD*.

Mega-City One is a futuristic metropolis located in a post-apocalyptic world stretching all the way down the Eastern US, and is home to hundreds of millions of civilians. Crime is rampant, unemployment is 85%, law and order is enforced sternly by the Judges – police officers with the power to arrest and sentence a criminal on the spot.

This *Quickstart* presents a basic version of the full ruleset in the *Judge Dredd & The Worlds of 2000 AD* core rulebook, and is designed to help you get started quickly. We assume that you know what a tabletop role-playing game is and the basic premise behind it.

This *Quickstart* assumes you will be playing the starter adventure, **State of the Empire**, and that you are using the four pre-generated character sheets included here: Judges Sera Devi, Clayton Halsey, Jessica Morris, and Terence Novak.

Judge Dredd & The Worlds of 2000 AD uses six-sided dice. A six-sided die is referred to as a “d6”. Multiple dice use the format “3d6” where 3 is the number of dice being rolled.

ATTRIBUTE CHECKS

Judge Dredd & The Worlds of 2000 AD is based around the attribute check. This involves rolling a number of six-sided dice (d6) in an attempt to reach a specific target number.

To make an attribute check, you add the dice you get from an attribute to the dice you get from a skill.

ATTRIBUTES

Each character has ten attributes:

- » STRENGTH (STR) used for tasks requiring physical might, such as lifting a heavy log.
- » AGILITY (AGI) used for tasks requiring dexterity, such as riding a Lawmaster.
- » ENDURANCE (END) used for tasks requiring stamina, such as running a marathon.
- » INTUITION (INT) used for tasks requiring perception or insight, such as spotting a trap.
- » LOGIC (LOG) used for tasks requiring knowledge and reasoning, such as rewiring a bomb.
- » WILLPOWER (WIL) used for resisting psychic control and other mental tasks.

- » CHARISMA (CHA) used for social tasks like bluffing or persuading somebody.
- » LUCK (LUC) used when chance is the primary determinant of what happens.
- » REPUTATION (REP) denotes your social standing, rank, and influence.
- » PSIONICS (PSI) used to use perform psionic feats.

Under each attribute, there are two numbers. The top number shows the character's basic attribute score. You can ignore this number in the *Quickstart*. The bottom number shows the number of dice (referred to as "d6") the character gets to roll when making an attribute check. For example, Judge Terrence Novak rolls 3d6 when making a LOGIC check, and he rolls 2d6 when making a STRENGTH check.

When a character attempts a task, and their success is in doubt, the Gamesmaster (GM) asks for an attribute check. If Judge Novak were trying to break down a door, the GM might ask for a STRENGTH check. In this case, Novak would roll 2d6. The GM decides which attribute is applicable to a given situation.

ATTRIBUTES																							
STR	4	2	AGI	7	3	END	4	2	INT	7	3	LOG	9	3	WIL	6	3	CHA	3	2	LUC	9	3

SKILLS

Below the character's attributes you can see a section of skills. These work in a similar way to attributes, and each skill grants a number of dice which can be added to an attribute check. For example, if Judge Novak were attempting to climb a wall, the GM would ask for an AGILITY check (which lets him roll 3d6). He could add the 1d6 he gets from his *climbing* skill to roll a total of 4d6 instead.

SKILLS											
perception			climbing			conviction			law		
3	2	d6	1	1	d6	1	1	d6	3	3	d6
light armour			clubs			medicine			survival		
1	1	d6	1	1	d6	2	2	d6	1	1	d6
genetics			dodging								
1	1	d6	1	1	d6	d6			d6		

The GM might impose die penalties (removing one or more dice from the character's dice pool) or grant bonuses (adding one or more dice to their dice pool) based on situational complications or advantages. If it was raining, the

GM might impose -1d6 to Novak's climbing check, meaning that he only rolled 3d6, rather than 4d6.

You can add any skill to any attribute. Some common combinations might include:

EXAMPLE TASK	ATTRIBUTE (SKILL)
LIFTING SOMETHING HEAVY	STR (CARRYING)
CLIMBING A WALL	AGI (CLIMBING)
PLAYING CHESS	LOG (GAMING)
RIDING A LAWMASTER	AGI (RIDING)
SPOTTING A PERP	INT (PERCEPTION)
DEFUSING A BOMB	LOG (EXPLOSIVES)
SWEET-TALKING A GUARD	CHA (PERSUASION)
LYING TO A JUDGE	CHA (BLUFFING)

Firing a weapon usually uses INTUITION or AGILITY (whichever is higher), while striking with a melee weapon usually uses AGILITY or STRENGTH.

The GM sets the difficulty of the check. Most tasks require a roll of 10 or more, while *Challenging* tasks might require rolls of 15 or even 20. Extremely difficult tasks might require 25 or even higher. Here are some examples:

BENCHMARK	DIFFICULTY SCORE	EXAMPLES
ROUTINE	10	CLIMBING A WALL
CHALLENGING	15	PICKING A LOCK
DIFFICULT	20	JUMPING A CANYON ON A LAWMASTER

COMBAT

Combat is a basic application of the attribute check. You use STR, AGI, and INT to make attribute checks to attack your foes. But first, the basics!

Rounds. Combat is divided into rounds. Each round, each player and each NPC or foe takes a turn consisting of two actions. Those actions can be any two actions - moving, shooting your Lawgiver, striking a perp with your daystick, using a psionic power, and so on. You can do two different actions (such as move and then shoot) or one action twice (move twice, or shoot at a perp twice).

Initiative. To determine what order the players and perps take their actions in, combat starts by rolling an INT attribute check, which is referred to as "rolling initiative". All combatants roll an INT check (they may add their tactics skill if they have it) and the GM then lists them in descending order. This is the order in which combatants take their turns. When you reach the bottom of the list, simply go back to the start again and repeat until the combat is over. Note that the pre-generated character sheets have this roll noted for you: e.g. Novak rolls 4d6.

Battlemap. In the full game, combat can be played on a battlemap, with positioning and cover forming an important part of the game. In this *Quickstart*, we will not be using a battlemap; the action takes place in the players' imaginations. It is important that the GM describe the surroundings so that the players have a good idea of what actions might be appropriate when it comes to their turn.

// Moving

The character sheet has a box which notes the character's SPEED. This is denoted in terms of 5-foot squares on the battlemap, so Novak's SPEED of 6 means he can move 6 squares (or 30 feet) with one action.

The character sheet also gives some additional, optional speeds, such as the character's CLIMB speed.

DERIVED STATS				
SPEED 6	CLIMB 2	SWIM	CARRY 801b	INITIATIVE
JUMP 14'4'	OTHER		2001b Max Lift	ACTIONS

// Attacking

When you attack you make an attribute check, just like with any other task. The most common types of attack are:

Ranged attacks which require an AGI or INT check vs the target's RANGED DEFENCE.

Melee attacks which require a STR or AGI check vs the target's MELEE DEFENCE.

Psionic attacks which require a PSI check vs the target's RANGED or MENTAL DEFENCE (depending on the nature of the attack).

DEFENCE scores are recorded on the character sheet, and indicate the number the attacker needs to roll in order to successfully attack the target.

DEFENCES				
MELEE 14	MENTAL 16	SOAK Judge uniform & helmet 5	HEALTH 20	
RANGED 14	VITAL 12	VULN none	Current	
		IMMUNE none		

Some things modify your attack roll:

- » If you are at long range (a distance in squares higher than the range increment noted on your character sheet) you lose one die from your dice pool.
- » If your target is in cover, you lose two dice from your dice pool. A target engaged in melee combat is also considered to be in cover.
- » If you are on higher ground (10' for ranged attacks, 5' for melee) you gain one extra die in your dice pool.
- » The pre-generated characters all have the ability to Aim or Feint. This takes one action, and means that if you attack with your second action, you gain one extra die in your dice pool.

The full rules have some more advanced modifiers, including crossfires and other tactical elements, but this *Quickstart* just uses those listed above.

You'll note that the right-hand column, below, has some notes. These indicate some traits each attack has:

Standard Ex. is the Lawgiver's default ammunition. It has no special properties.

ATTACKS				
WEAPON	ATTACK	DAMAGE	RANGE	NOTES
Lawgiver	4d6			sidearm
Standard Ex.		2d6+3 ballistic	12	
Armour-piercing		half SE ballistic	6	half damage: ignores 10 SOAK
High-explosive		2d6+1 heat	8	burst 1: x2 dam. robots/obj.
Incendiary		1d6+1 heat	8	combust
Rubber ricochet		1d6+3 blunt	6	+2d6 in enclosed spaces
Heat-seeker		2d6+1 ballistic	10	+2d6 but not in 1st range inc.
Stun charge		2d6+1 electricity	3	stun
Brawling	3d6	1d6+2 blunt		
Daystick	4d6	2d6+3 blunt		
Bootknife	3d6	2d6+3 piercing		thrown
